

PERCEPTION[®]

**Ship Repair
From Customer RFP to Customer Invoicing**

Agenda

1. Introduction to Perception
 - a) What is ERP and EVM
 - b) The shipyard information flow
 - c) The Perception information flow
 - d) The central database
 - e) The WBS structure
2. Cost Estimating
 - a) Overview of the Project Estimate
 - b) The Cost Estimating Environment
 - c) Responding to the RFP – Creating the WBS structure
 - d) Building the Cost Estimate
 - e) Reports – monitoring the Estimate
 - f) Creating the Quotation
3. Proposal Acceptance - The ERP and EVM Process
 - a) Creating the Labor and Material requirements for Production
 - b) The Material Requirements – Requisitions and Purchasing
 - c) The Labor Requirements – Work Orders
 - d) Reviewing and Monitoring the Project Cost and Performance
4. Customer Billing
 - a) Compare the Project Cost with the Estimate
 - b) Create the Bill

What is ERP?

“An Enterprise Resource Planning (ERP) system is an integrated computer-based application used to manage internal and external resources, including tangible assets, financial resources, materials, and human resources.

Its purpose is to facilitate the flow of information between all business functions inside the boundaries of the organization and manage the connections to outside stakeholders. Built on a centralized database and normally utilizing a common computing platform, ERP systems consolidate all business operations into a uniform and enterprise-wide system environment.”

From Wikipedia, the free encyclopedia

What is EVM?

“Earned value management (EVM) is a project management technique for measuring project progress in an objective manner.

EVM has the ability to combine measurements of scope, schedule, and cost in a single integrated system. When properly applied, EVM provides an early warning of performance problems.

Additionally, EVM promises to improve the definition of project scope, prevent scope creep, communicate objective progress to stakeholders, and keep the project team focused on achieving progress.”

From Wikipedia, the free encyclopedia

ERP

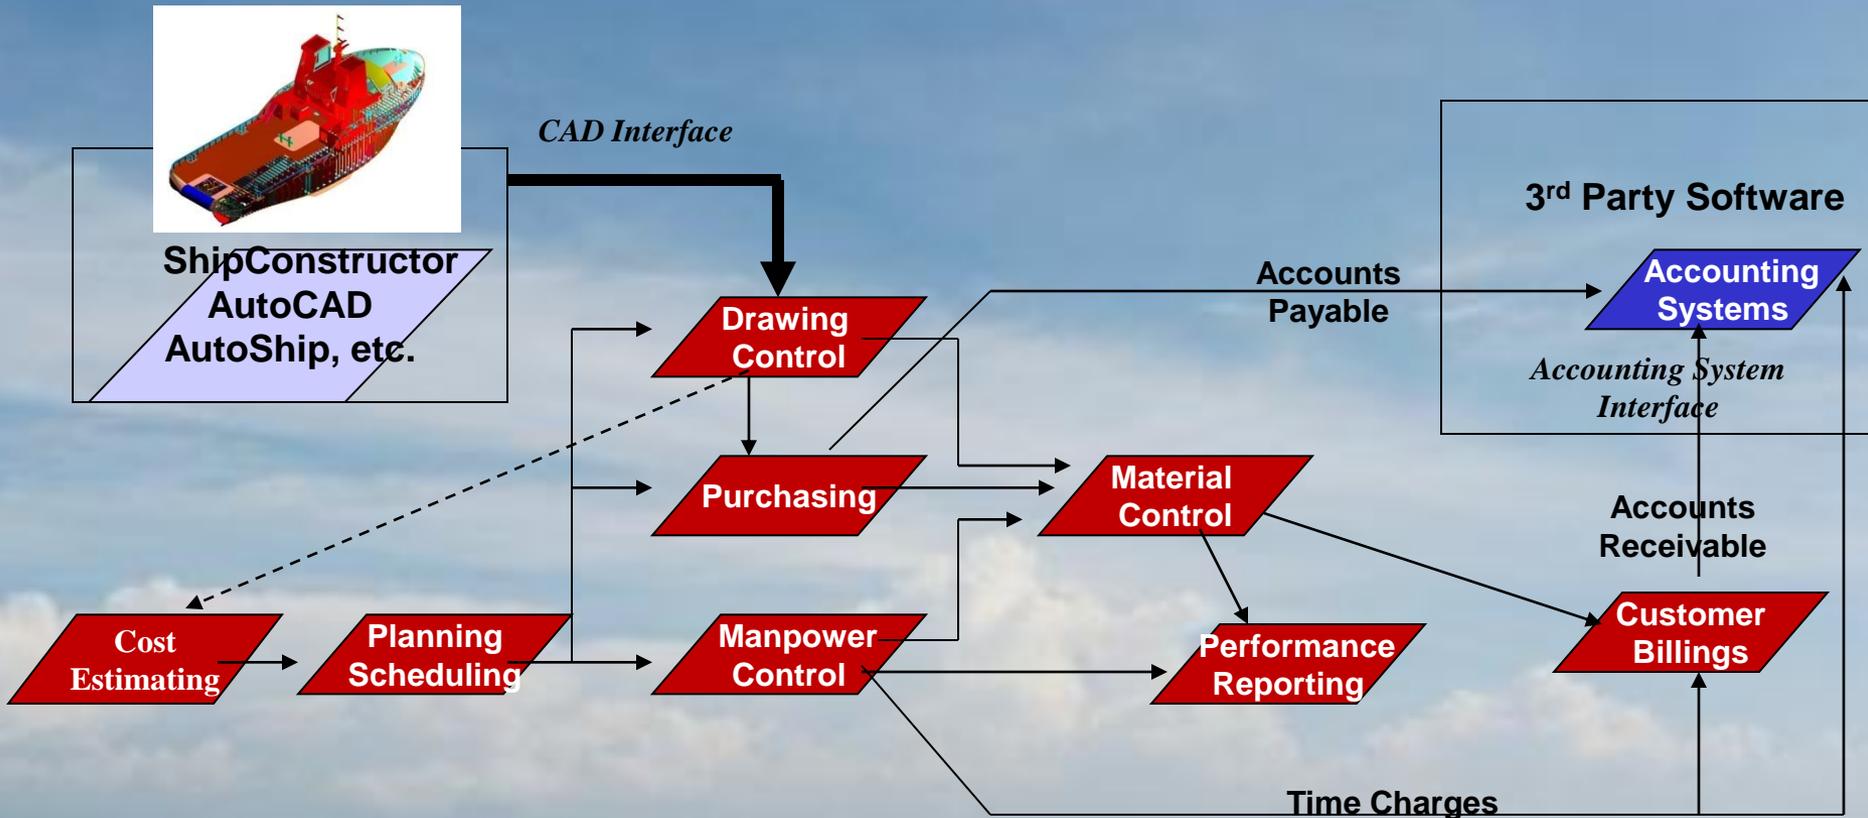

EVM

Coordinate Resources

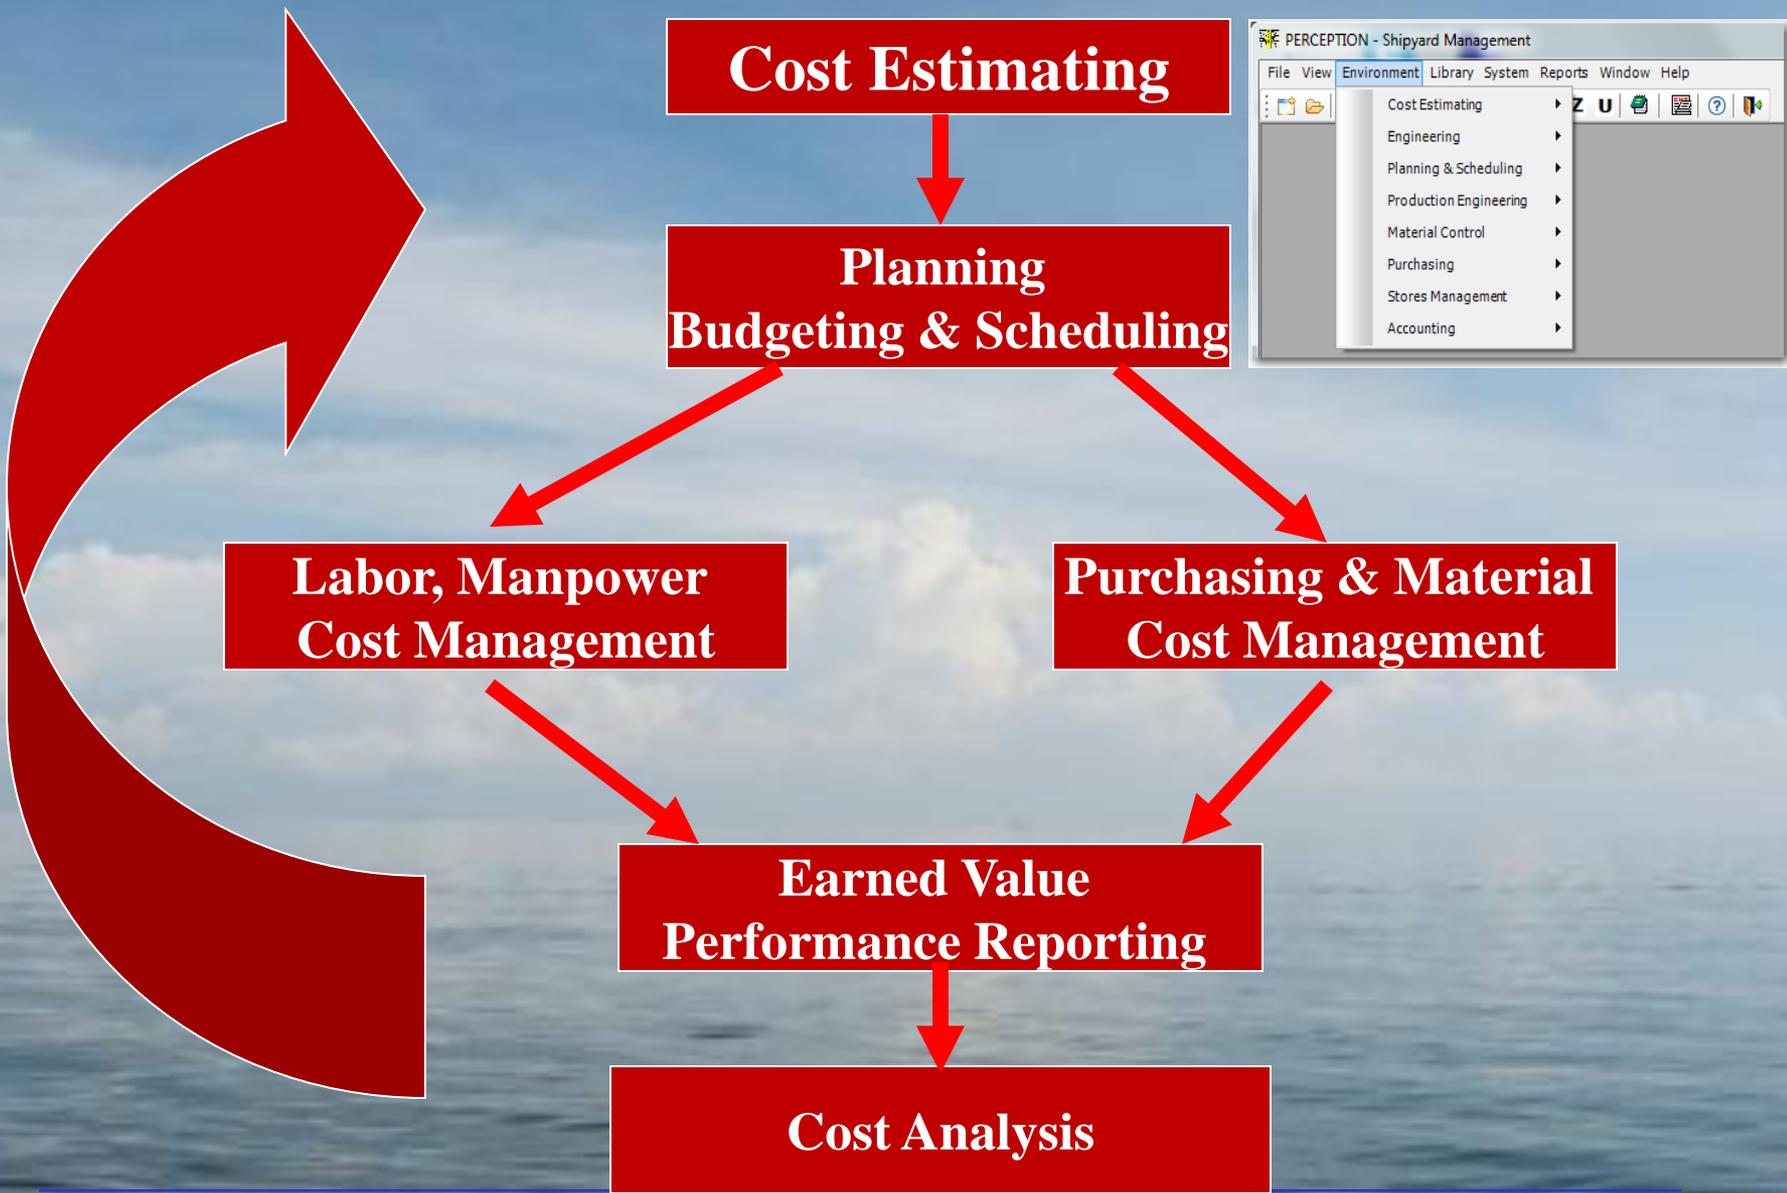

**Measure Progress &
Performance**

SPAR's *PERCEPTION*© System Combines ERP & EVM to better plan, coordinate and manage the shipyard.

Unlike other ERP and EVM systems, *PERCEPTION* was designed specifically for shipyards.

Information Flow for the PERCEPTION Integrated Shipyard Resource Management System

Each project has a hierarchy of information managed by the system, flowing from lowest level details to the highest level summary.

The “Contract” is the highest project level

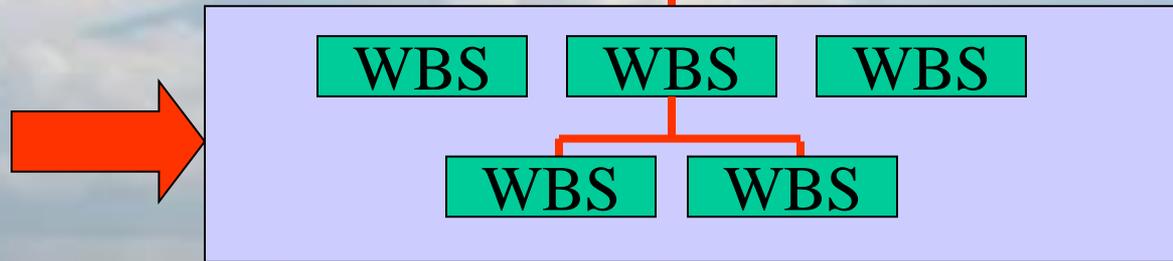

The “Project” is the highest operations project level

A contract may have multiple projects (e.g., multiple ship programs).

The Project Work Breakdown Structure (“WBS”) is an intermediary hierarchy depending on the project requirements.

Cost Estimate

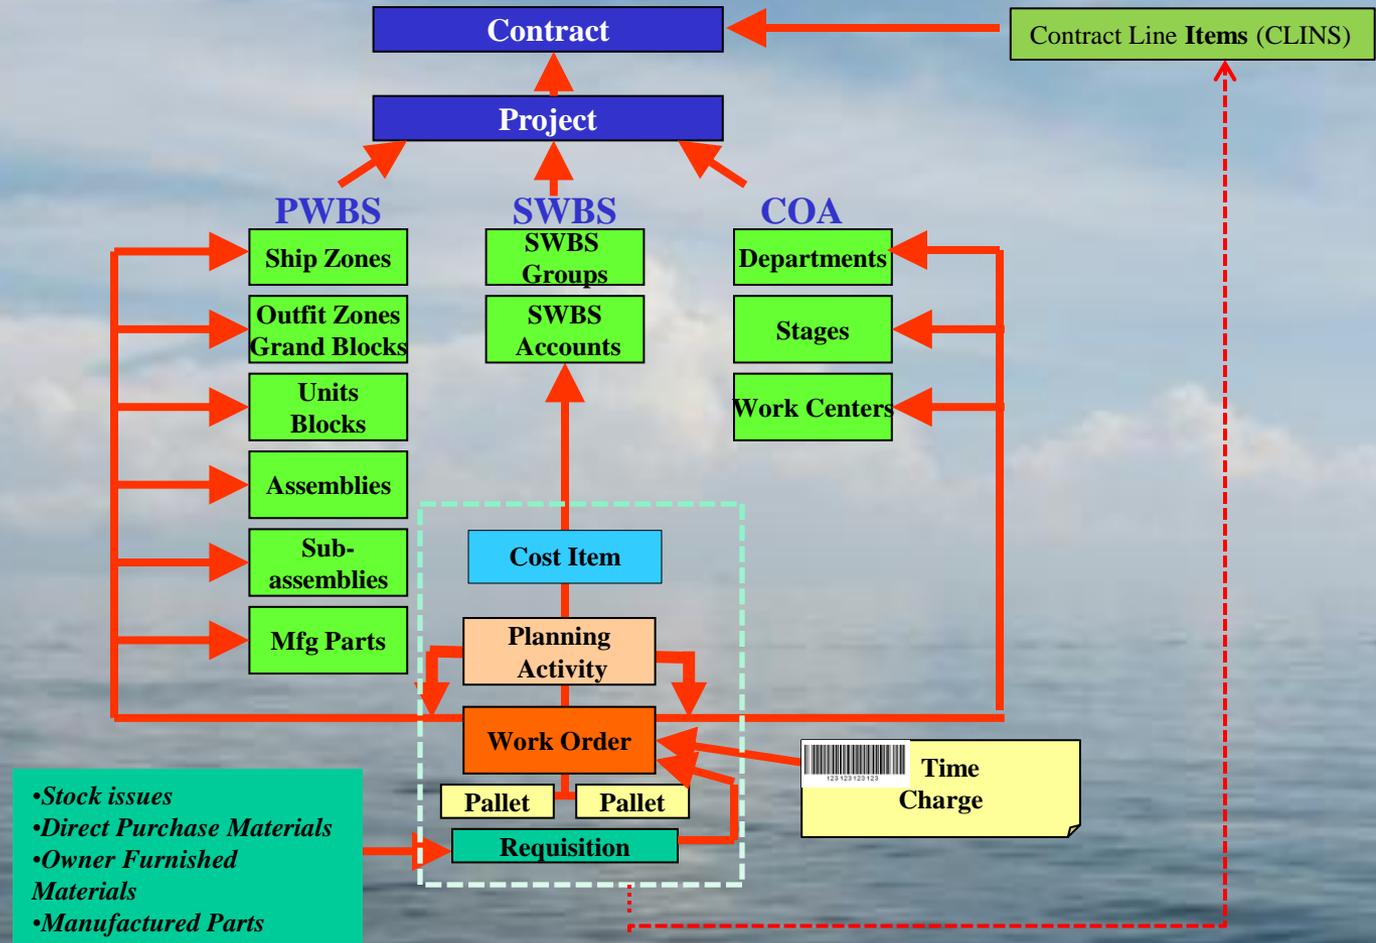

Material Resources

Labor Resources

The lowest level of project information

Project transactions can reference one or more different work breakdown structures. The WBS can be as simple or as complex as needed, contract by contract.

The Centralized Database.

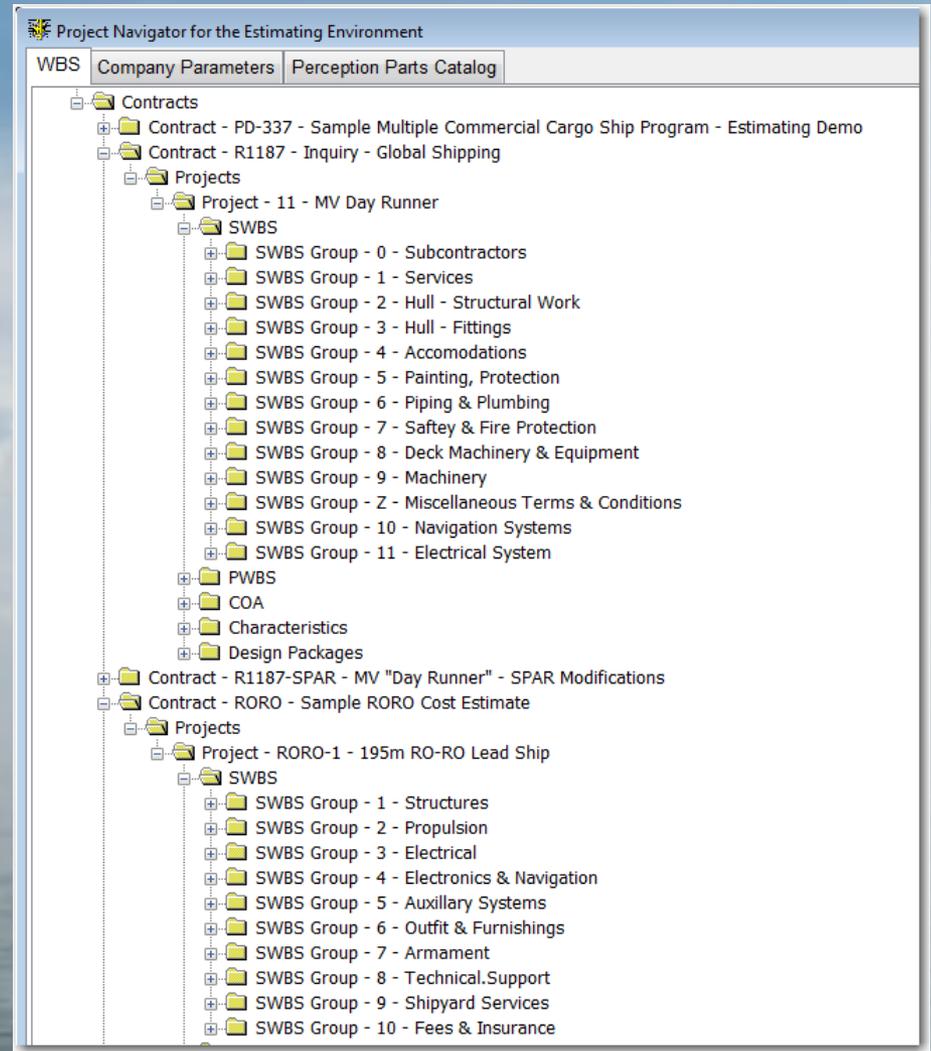

The *PERCEPTION* Work Breakdown Structure

1. User can define.
2. Can be different for every project.
3. Can be copied from one project to another.
4. Provides multiple different views of the same cost data.

SWBS – The System (Shipyard)
Work Breakdown Structure.

PWBS – The Product Work
Breakdown Structure.

COA – The Organizational Work
Breakdown Structure.

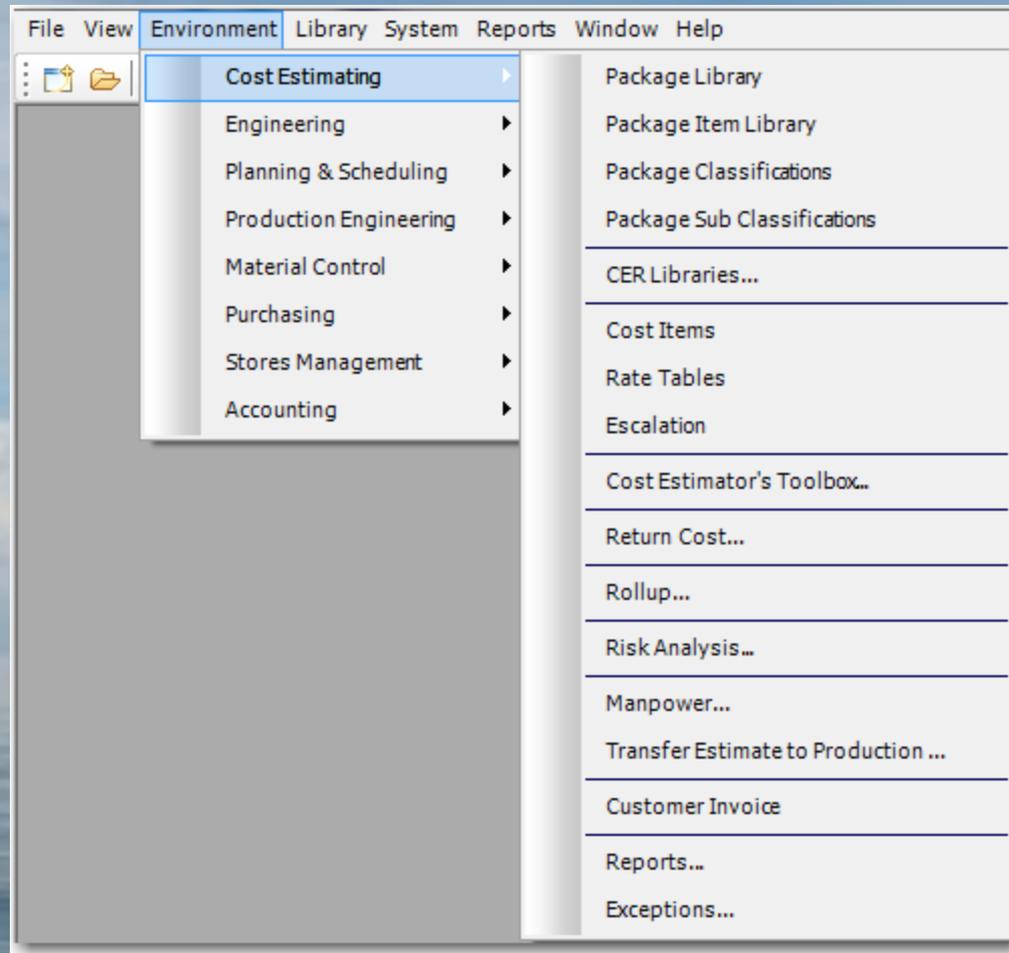

Cost Estimating

PERCEPTION was developed to permit cost estimating that can reflect modern ship design and production methods.

Using product- and process-based information, cost estimates can be generated quickly and accurately at any level of detail:

- Parametric cost estimates based upon modifiable ship design and mission characteristics
- Standard shipbuilding & ship repair interim products & services
- Detail cost estimates based upon engineered bills of material and equipment specifications.

The Software Cost Estimating Environment

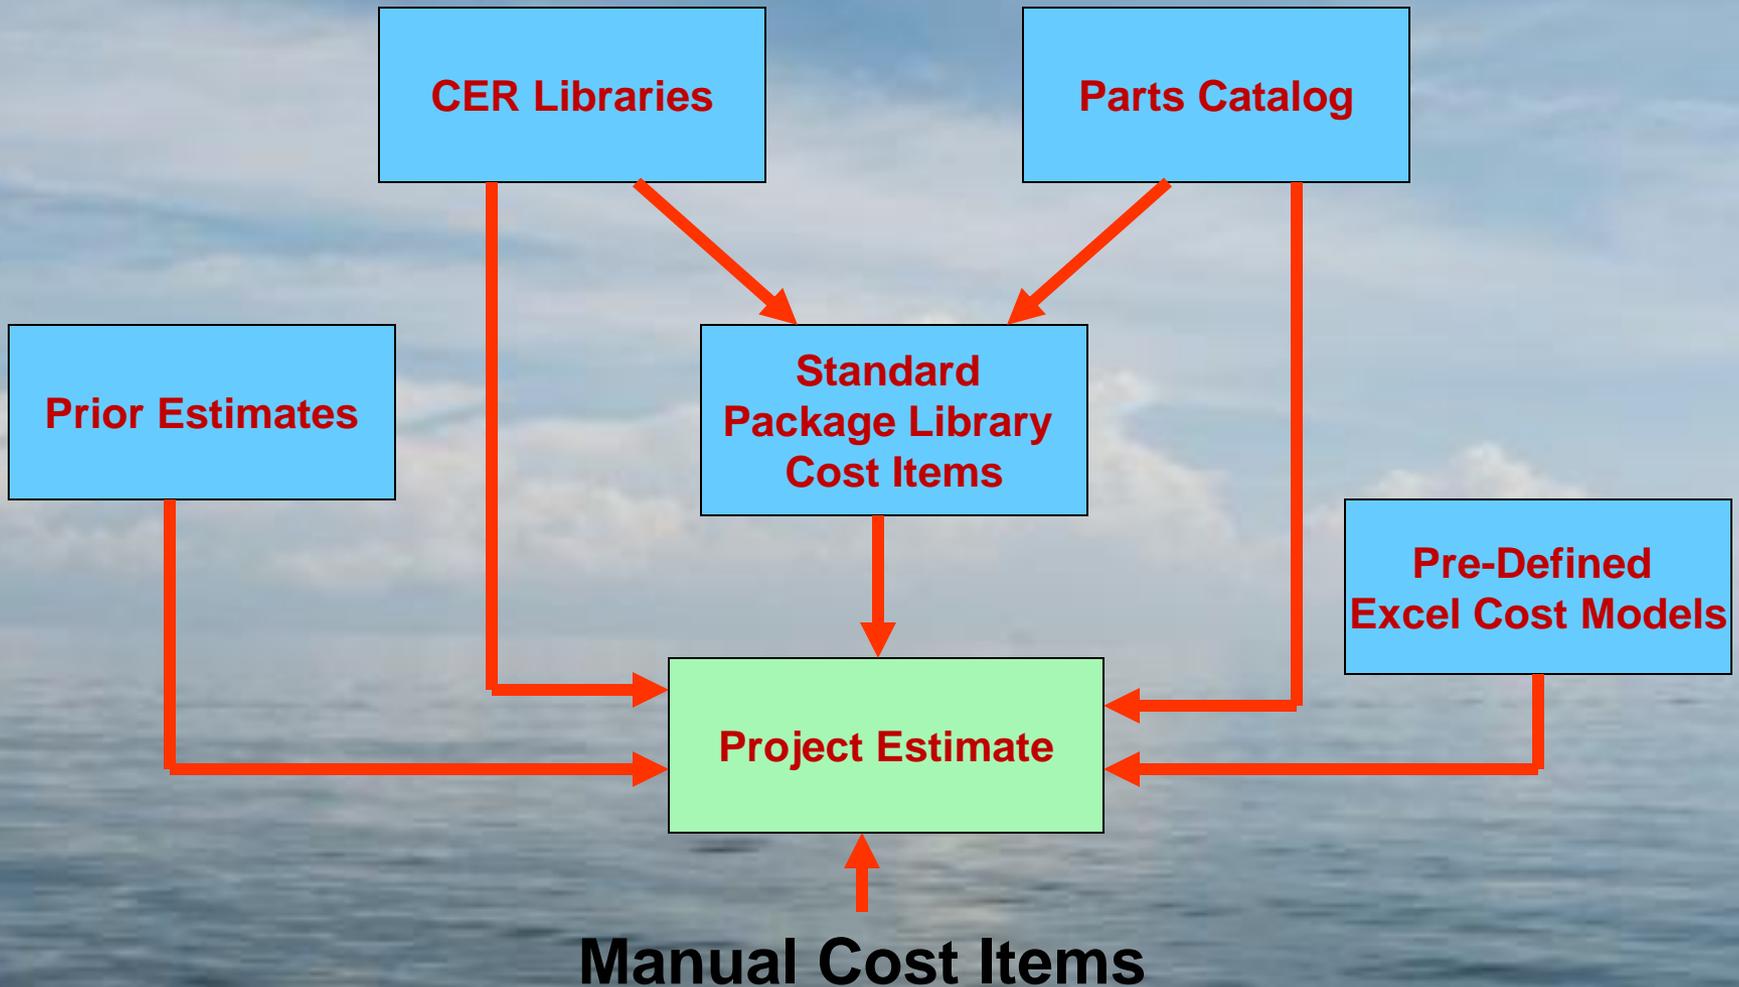

Libraries of predefined Cost Estimating Packages used to build an Estimate.

Libraries of predefined Cost Estimating Relationships (“CERs”).

The Cost Estimate and associated Rates.

The Customers Bill.

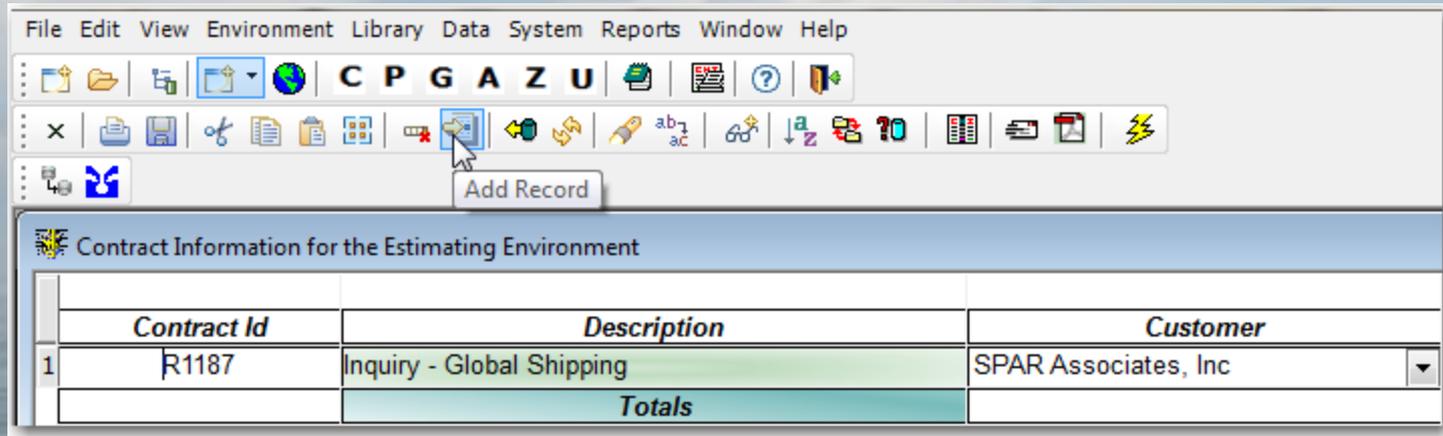

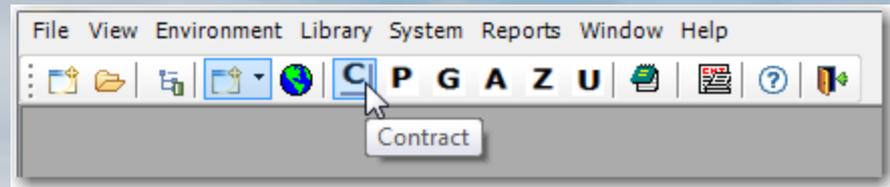

Putting together an Estimate from Various Sources of Cost Data: Prior Estimates, Cost Libraries, Cost Models & Manual Cost Entries

Responding to the RFP - Putting Together the Estimate and the Bid Package

Defining the New Project

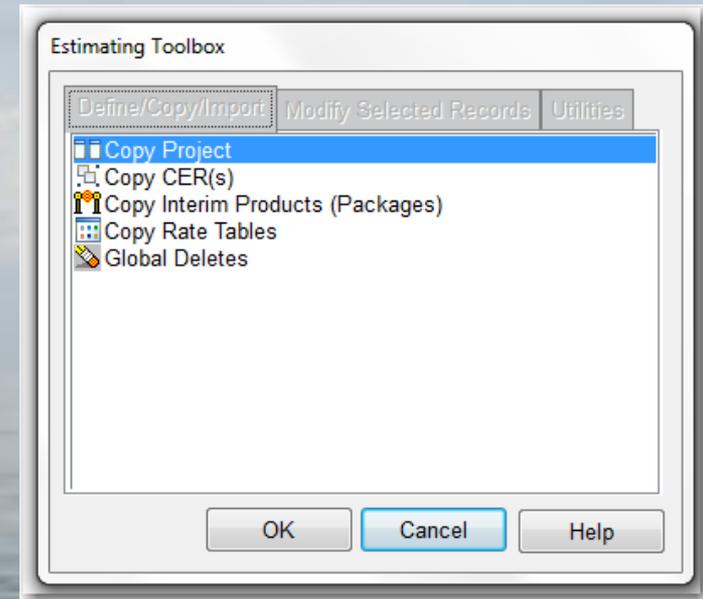

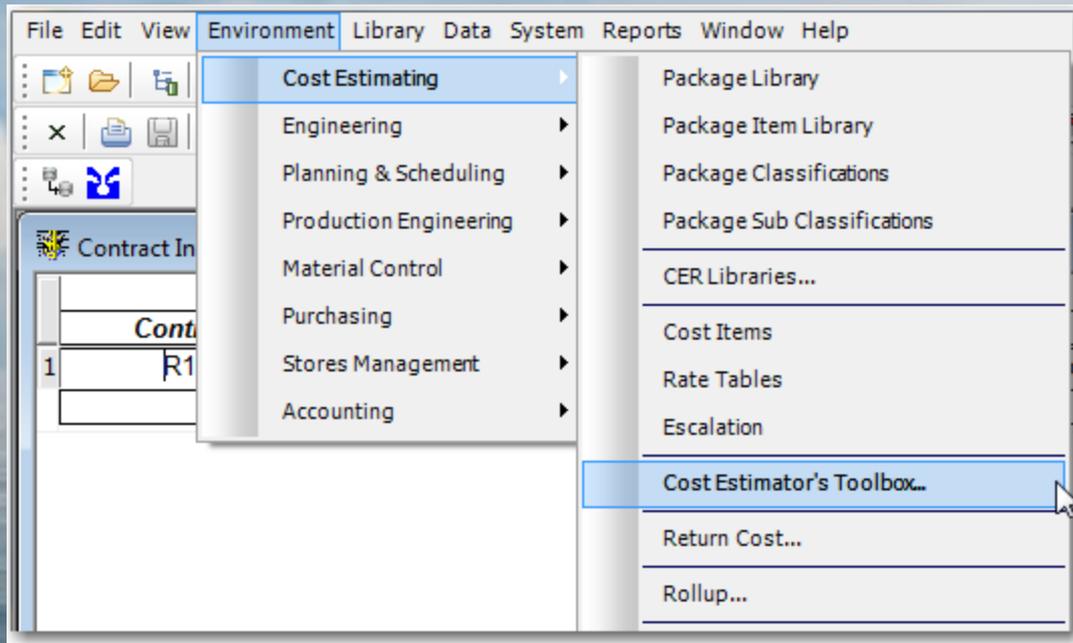

1. First we must define the WBS structure.
2. Create the Contract ID for this RFP.

Responding to the RFP - Putting together the Estimate and the Bid Package

Now Define the Project WBS

2. Now add the Contract WBS. This can be done by entering the data or copy the project WBS from an existing project. We elect to copy it from a project we setup previously which defines our default WBS used for repair projects. This method is faster and easier. It also provides a standard structure for all of our repair estimates.

Responding to the RFP - Putting together the Estimate and the Bid Package

Copying the WBS

1. Select the Contract and project to Copy from using the drop downs list.
2. Now Select the Contract to copy to.
3. Enter the Project number to Create for this Contract.
4. Select which WBS elements to copy.

Copy Projects

From Contract: WBS-Various
To Contract: R1187
Learning Curve: 100.00%

Responding to the RFP - Putting together the Estimate and the Bid Package

Complete Any Optional Project Setups

1. Drill down to the Contract details by double clicking on the contract we created previously.
2. Add the Contract Line Items (CLINs, optional; only if needed).
3. Add the Ship Characteristics (optional, only if needed).

Responding to the RFP - Putting together the Estimate and the Bid Package

Now Start the Estimate – Enter Cost Items into the WBS

1. Drill down from the Contract to the Project details by switching to the Project tab and double clicking on the project.
2. Click on the Project SWBS Groups tab.
3. Now Select the row you wish to add Cost Items to.
4. Switch to the SWBS Accounts tab and select the Account you wish to add Cost Items to.

Add "Project" worksheet

Responding to the RFP - Putting together the Estimate and the Bid Package

Adding Cost Item Using Manual Entry Method

1. Click on the Cost Items tab to begin adding Cost Items to the Estimate.
2. Since we selected a SWBS Group and Account, the software will automatically assign that WBS to each Cost Item you add. You can override this.
3. Click on the Add button to add an item.

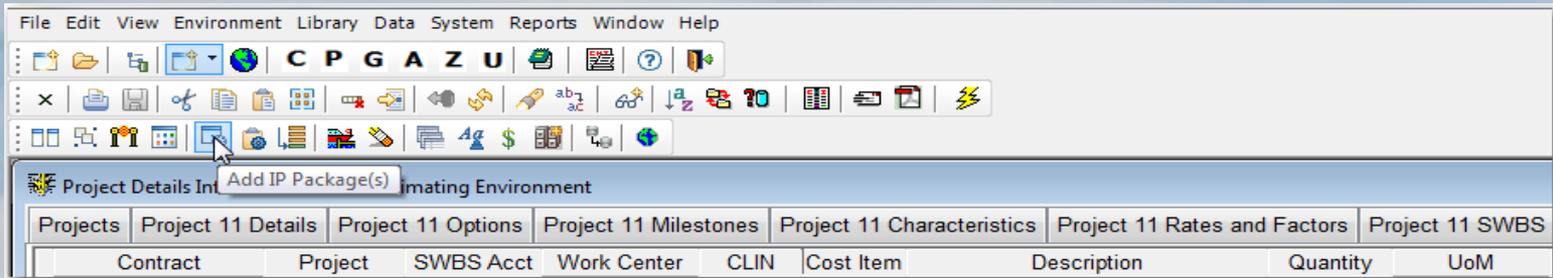

The screenshot shows a software interface with a menu bar (File, Edit, View, Environment, Library, Data, System, Reports, Window, Help) and a toolbar. The 'Add Record' button is highlighted. Below the toolbar is a section titled 'Project Details Information for the Estimating Environment' containing a table with the following data:

Projects	Project 11 Details	Project 11 Options	Project 11 Milestones	Project 11 Characteristics	Project 11 Rates and Factors	Project 11 SWBS		
Contract	Project	SWBS Acct	Work Center	CLIN	Cost Item	Description	Quantity	UoM
1 R1187	11	101	ASL03	A	1.2	Dock Preparation	1.00	LOT

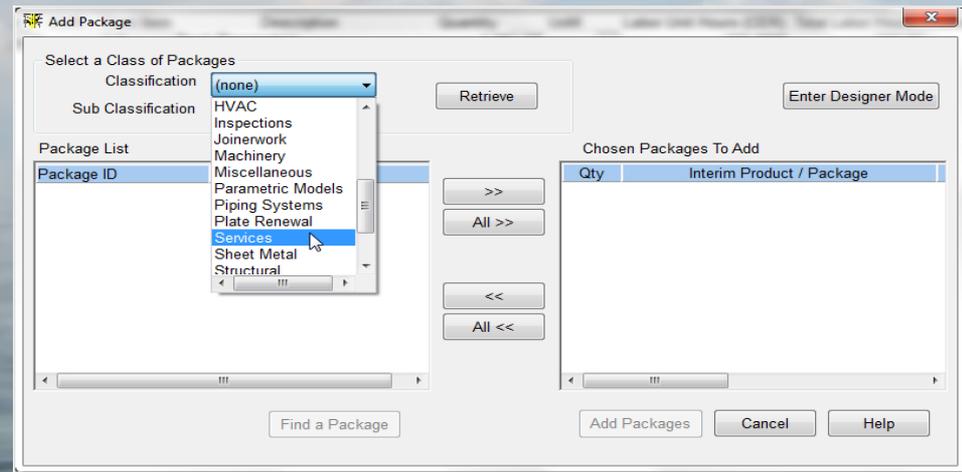

Responding to the RFP - Putting together the Estimate and the Bid Package

Adding Cost Item Using the Package Method

1. On the Cost Item window, click on the Add IP Package(s) button. This will open the Package “shopping cart” so that you may select the package(s) you wish to add to your estimate.

2. Select the type of Package from the drop down list.
3. Click on the Retrieve button to get the packages from the database.

Responding to the RFP - Putting together the Estimate and the Bid Package

Adding a Cost Item Using the Package Method

1. On the Cost Item window, click on the Add IP Package(s) button. This will open the Package “shopping cart” so that you may select the package(s) you wish to add to your estimate.
2. Select the Package on the left from the List and drag it to the window on the right.
3. Enter the quantity you wish. You can add as many packages as you want. You can even retrieve different Package Classifications and add them.
4. When done, click on the Add Packages Button.
