

PERCEPTION MAT-PAC

The Material Management Module

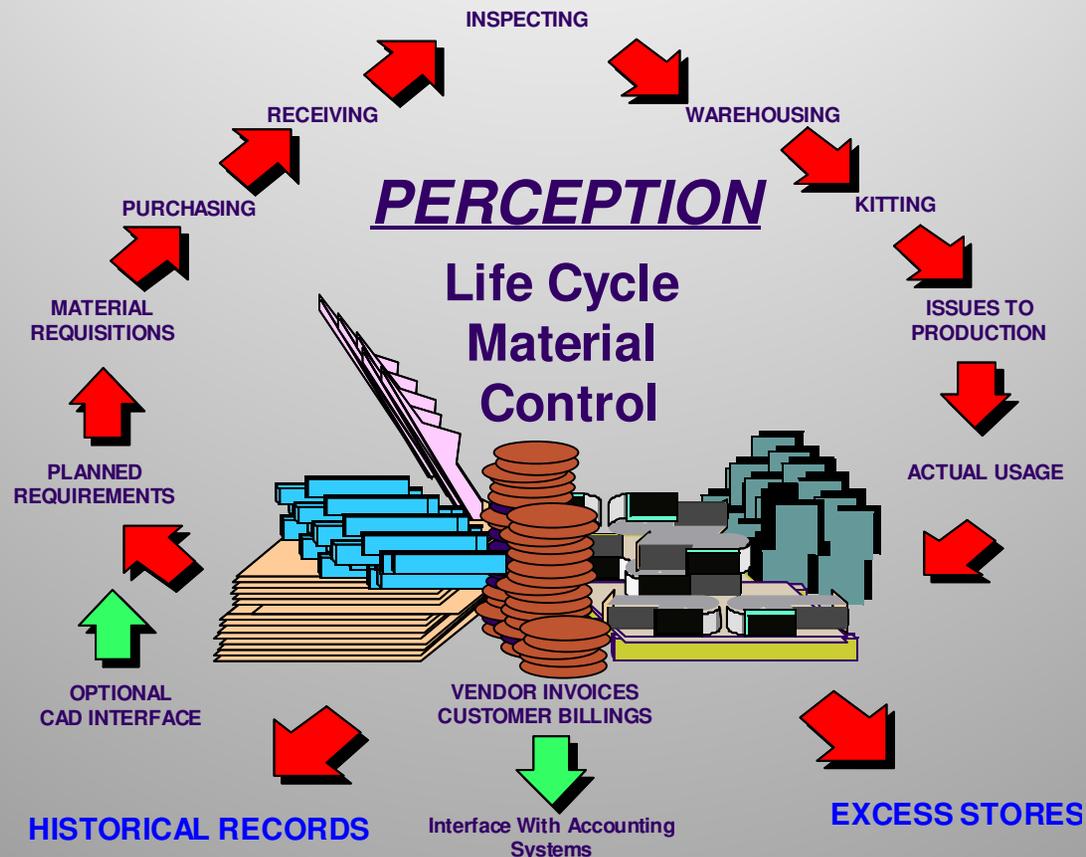

***PERCEPTION* manages and coordinates all material control functions:**

- Engineering bills of material
- Purchasing requisitions
- Purchase orders, RFQs and amendments
- Delivery expediting information
- Delivery receipts & inspections
- Warehousing & storage locations
- Production requisitions
- Work order pallets
- Issues to production
- Vendor invoice control
- Customer billings (fixed price services and time & materials)

System Benefits

1. Consolidated information of all purchasing and material control activities, from requisitions to purchases, deliveries and vendor invoice control.
2. Better material planning & controls for production work orders.
3. Complete tracking of material quantities and costs & commitments.
4. Superior parts catalog designed for easy use and to eliminate duplicate parts, a typical inventory problem.
5. Fast and accurate reporting of material cost and delivery problems.
6. Different purchasing functions to address special needs for new construction and ship repair.
7. System handles all types of shipyard material: direct purchase, stock, manufactured parts, and owner furnished equipment/material.

Managing Material From Engineering to Production

Different material control characteristics between new construction and ship repair:

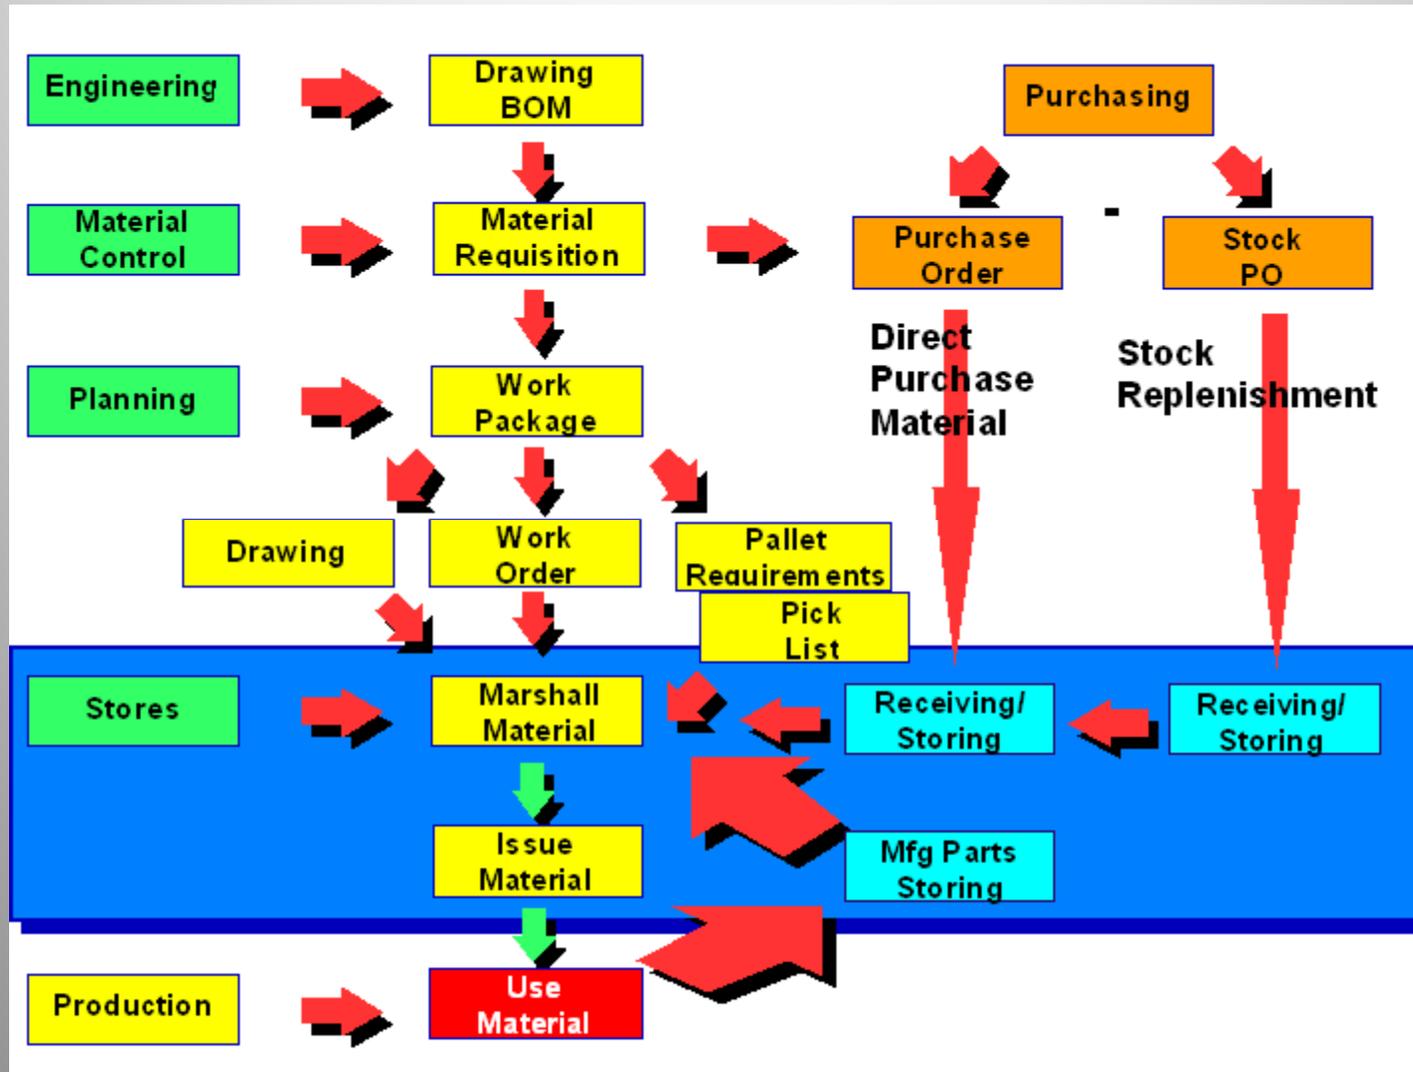

New Construction: Detailed engineered bills of material requiring careful time-phased scheduling and integration within the construction work plan.

Ship Repair: Immediate needs determined more by waterfront, rather than engineering requirements.

Sources of Ship Materials

- Direct purchased material (spec items & standard parts)
- General Stock inventory
- Owner-furnished material
- Manufactured parts

Flexible Steps for Processing Material

New Construction

Material requirements for new construction is typically determined and scheduled according to a detailed production plan.

This plan details the stages of manufacturing and assembly from parts manufacturing to sub-assemblies, assemblies, hull blocks and finally to on-board zone outfit.

New construction material purchasing schedules material availability in time to meet detailed production schedules.

Ship Repair

Material requirements for ship repair is typically determined and scheduled at a much quicker pace than possible for new construction. Often times the full scope of repair work is not known until after the ship arrives and detailed inspections are made.

For ship repair, there is less advanced time available for planning and scheduling material purchasing. Ship repair depends more upon on-hand general stock inventories and short-term deliveries as a source for most material requirements.

PERCEPTION's Standard Parts Catalog

The Parts Catalog groups parts into the following part types:

- **General Stock**
- **Standard Direct Purchase Items**
- **Standard Manufactured Items**

Within the each part type, a part can be further categorized by:

- **By Part Classification**
- **By Part Sub-classification**

Parts Class

**Metals, Steel
Gr. D**

Angle
Bar
Bulb Flats
El
Plate
Sheet
Tee

ST-L- 6" x 3.5" x 1/2"
ST-L- 6" x 3.5" x 3/8"
ST-L- 6" x 3.5" x 5/16"
ST-L- 6" x 4" x 7/8"
ST-L- 6" x 4" x 3/4"
ST-L- 6" x 4" x 5/8"
ST-L- 6" x 4" x 9/16"
ST-L- 6" x 4" x 1/2"

**Metals, Steel
Gr. AH36**

Parts Sub Class

Catalog Parts

An option for each Part is a list of default classification attributes.

Certain functions in the system allow the user to scan any set of parts in its part classification and select only those parts that meet a prescribed set of part attributes, such as color, size, & material.

Pipe Attributes

Type Material
Type Construction
Type Connection
Schedule
Outside Diameter
Inside Diameter
Wall Thickness
Weight Pipe per Meter
Weight with Water per Meter
External Surface Area

The default part attributes worksheet allows the user to define as many different part attributes as necessary for the given Part Classification or Sub Classification

Default Part Classification Attributes for the Estimating Environment					
	Part Classification	Part Attribute Type	Part Attribute	Description	UoM
1	VALVE	Material	ASTM Grade	ASTM Material Grade	EA
2	VALVE	Physical	P Dia	Pipe Diameter	EA
3	VALVE	Performance	PSI	Max operating pressure	EA
4	VALVE	Physical	Type	Valve Type	EA

Once the default part type attributes have been defined for the Part Classification, **the system will automatically copy this set of attribute names to each part entered under this classification.**

The user then will need to enter the attribute values appropriate for each part in that classification.

The Part Sub Classification default attributes work exactly the same way.

The Parts Catalog provides an easy view of all pertinent information about any part in the catalog.

Pictures, drawings & spec files also can be identified here.

Parts Catalog Detail Information

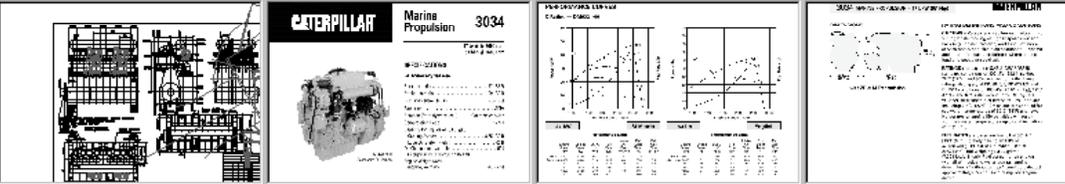

Parts Catalog | **Attributes** | Inventory | Transactions | Last Receipts | Pending Deliveries

Classification: Engines, Diesel Part Type: Direct Purchase Description: Caterpillar 3034 NA

Part ID: CAT-3034 NA MFG P/N: 3034 NA

NATO ID: - - -

Standard Header & Footer Library

All Foreign Funds & Currencies

Automated Multiple Sales Taxes At Item Level

Amendments & Change Orders

Customized Purchase Order Forms Available

Email communications of purchase orders

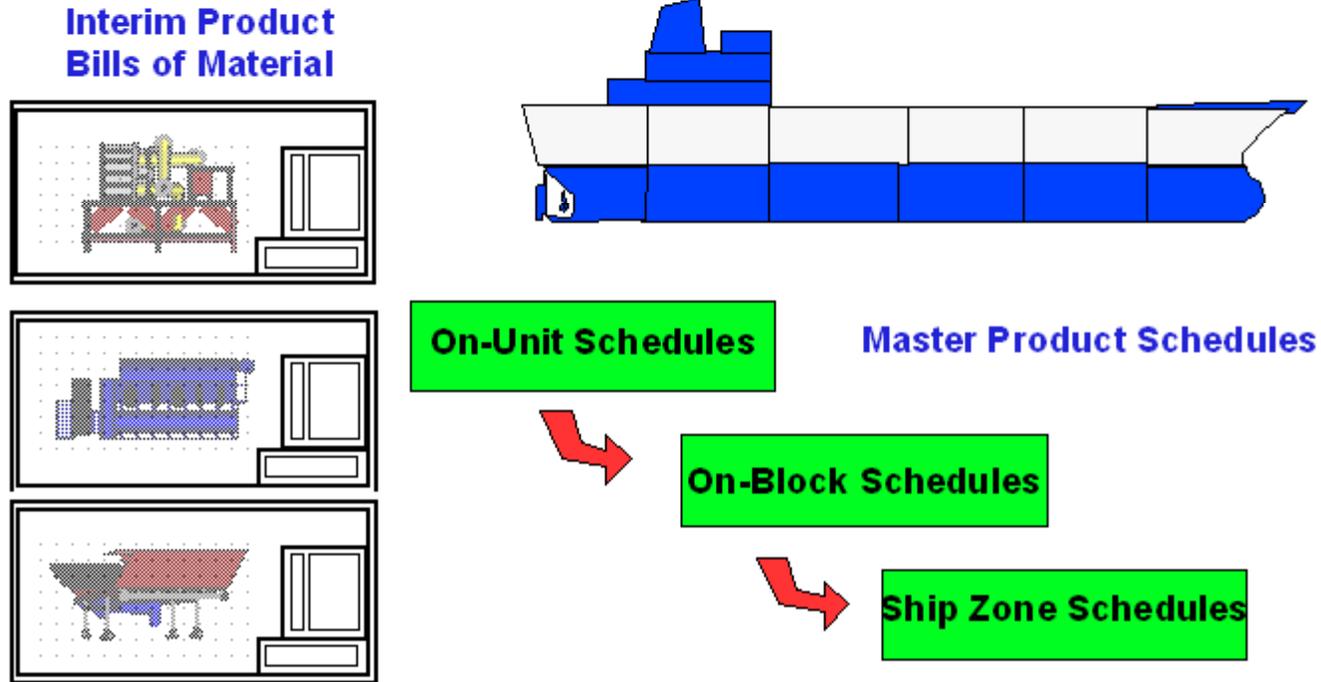

Purchase Order Options:

- Send hardcopy to vendor
- Send via fax linked to system network
- Send via email direct from *PERCEPTION*

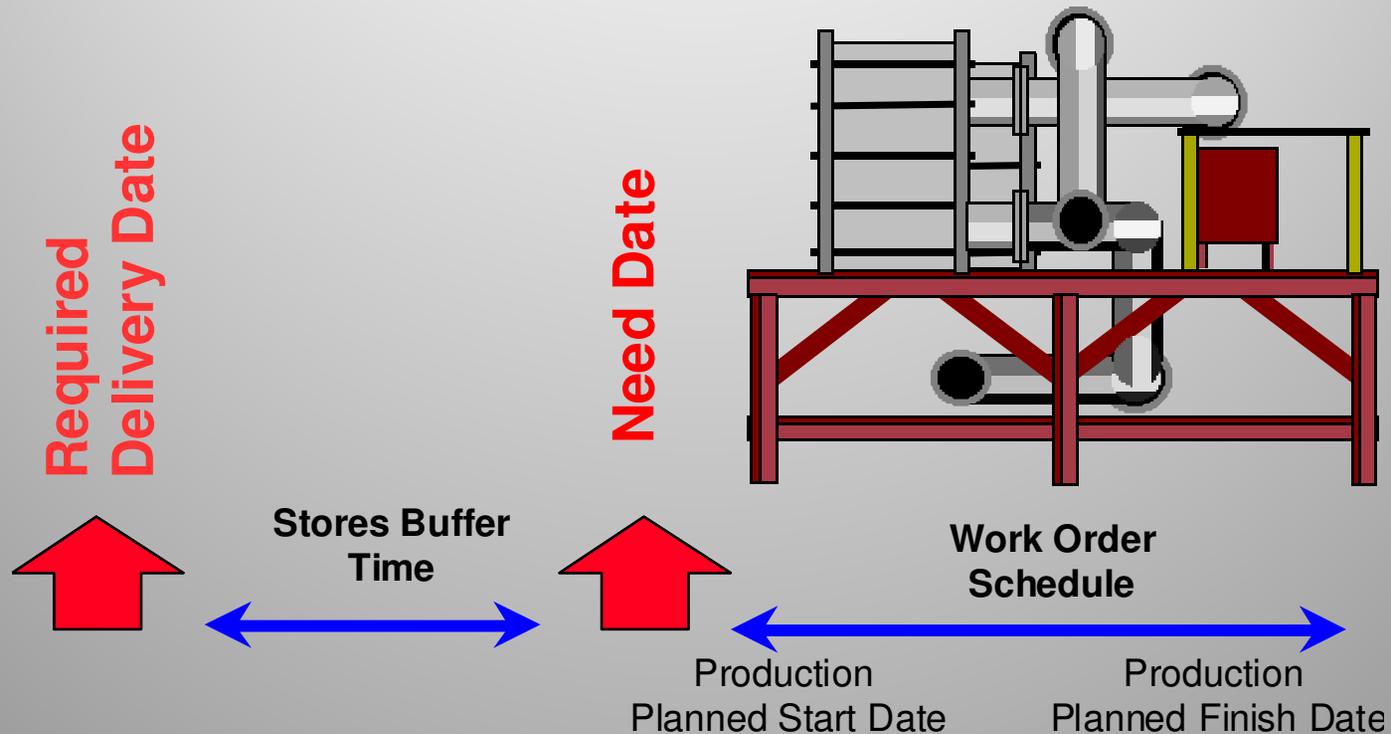

Managing Material Schedules

Planning & Scheduling Material Purchases & Deliveries

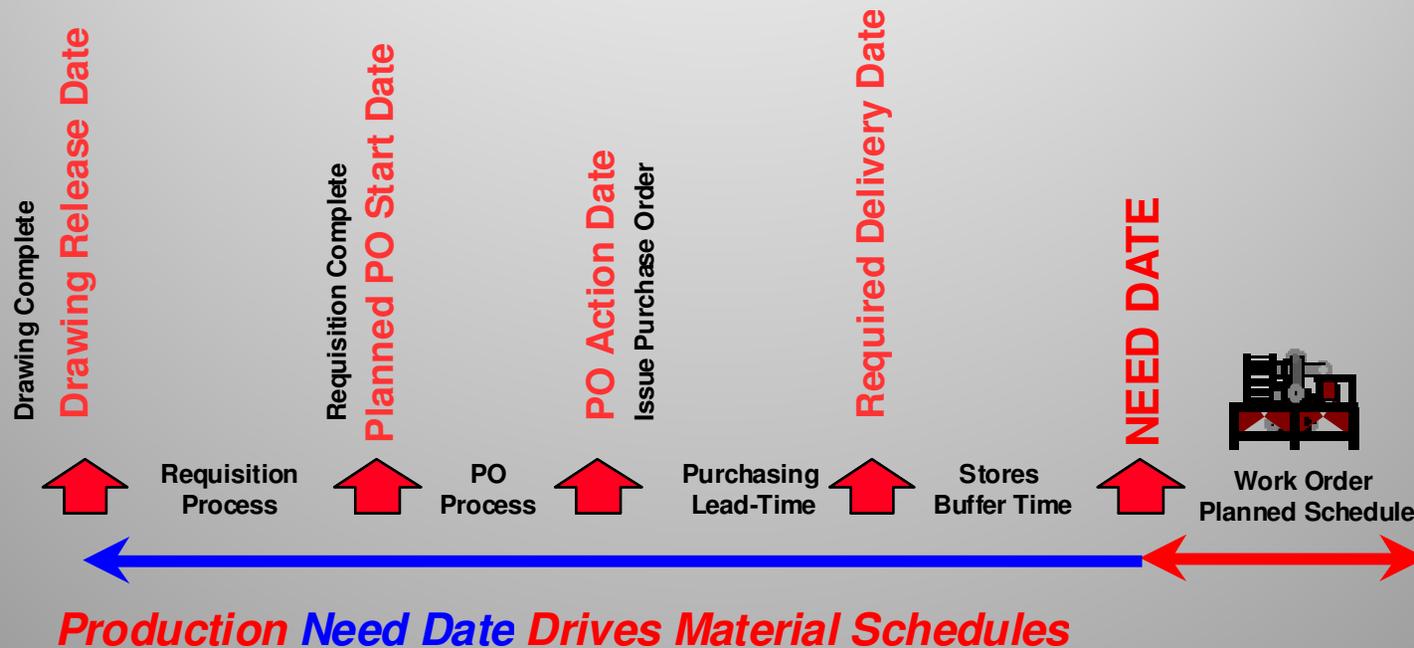

Scheduling Deliveries to Meet Master Product Schedules

Material Deliveries Must Be Scheduled to Meet Required Delivery Dates

Production Need Date Drives Material Schedules

Major categories of purchase schedules:

- Long Lead Items
- Standard Parts for Bulk Purchase
- Spec Items
- Non-Spec, Non-Standard Items
- General Stock Items
- Subcontracted Work

PERCEPTION also provides features for managing engineering drawing schedules, their bills of materials and tracks levels of reviews and approvals.

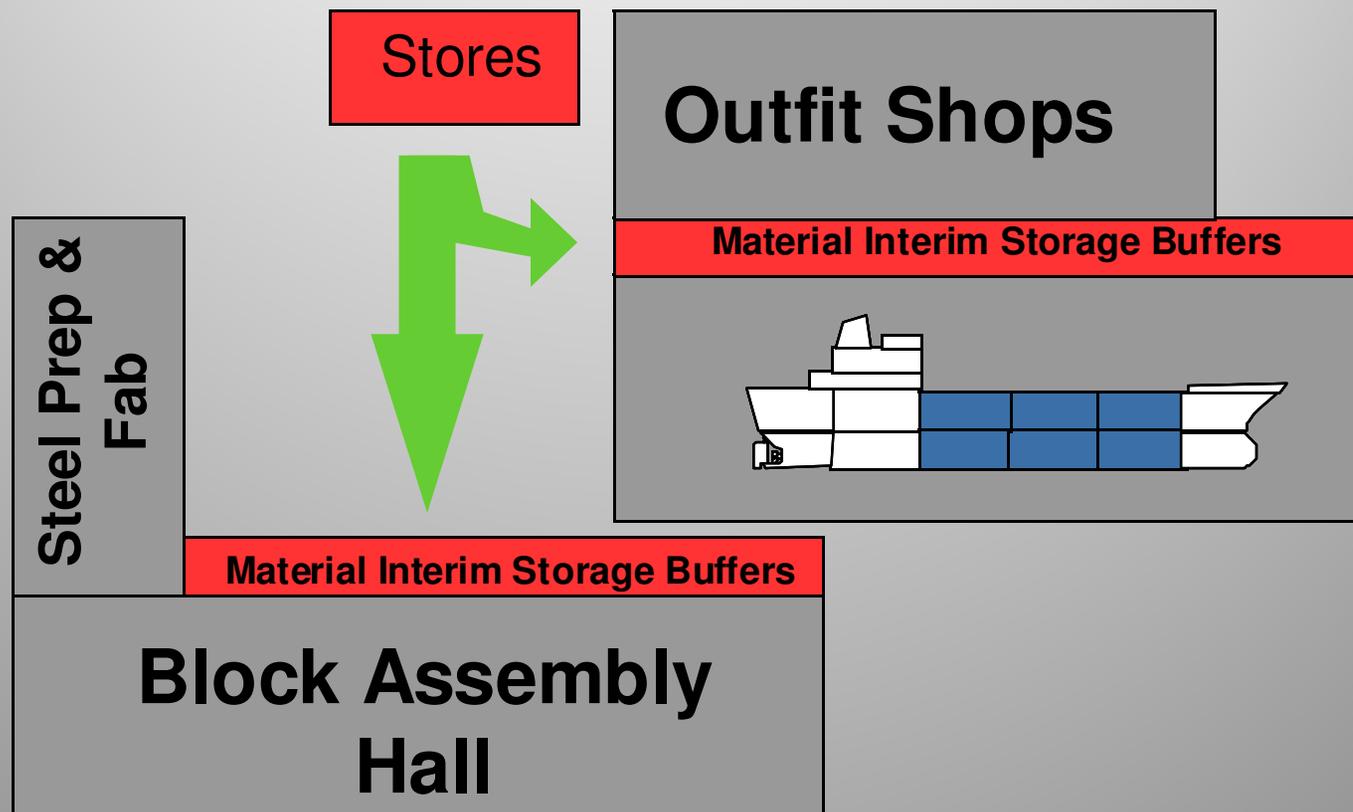

PERCEPTION provides a series of important delivery expediting reports to help ensure deliveries are made on time.

Issuing Material to Production

Several Methods To Issue Material:

- By Engineering Requisition**
- By Pallet**
- By Foreman Requisition
("Quick" Issue)**

Pre-Marshalling Pallet Materials to Work Site Buffer Storage Areas

Minimizing Material Handling Costs:

- Store material nearby work areas
- Store material ready for fork lift pickup
- Vendors pre-mark, label & tag material
- Vendor deliver direct to work areas
- Vendors remove all packing and cartage material

Bar Code Options

- Tool Room Control
- Production Issues
- Physical Inventory

Tracking Material Quantity Requirements

Tracking Item Quantities

Quantity Required Versus:

- Purchased Quantity
- Quantity Reserved From Stock Inventory
- Quantity Received
- Quantity Pending QC Inspection
- Quantity Accepted & Rejected By QC Inspection
- Quantity Issued To Production

Automatic Units-of-Issue Conversion:

- Purchased UOI Versus Production UOI

Stock Inventory Management

Stock Inventory Control Management

- **Multiple Stores Location Control**
- **Automated Reorder Reporting & Requisitioning**
- **Reorder To Minimum or Maximum Options**
- **Alternate Minimum Levels For Slow Business**
- **Stock Pricing For Contracts**
- **Stock Costing For Asset Accounts**
- **Time-Phased Physical Inventory**
- **Monthly & Yearly Usage Recording**
- **Tracking Last 3 Purchases From Last 4 Vendors**

Material Cost Management

PERCEPTION tracks costs against budgets
and material reserves

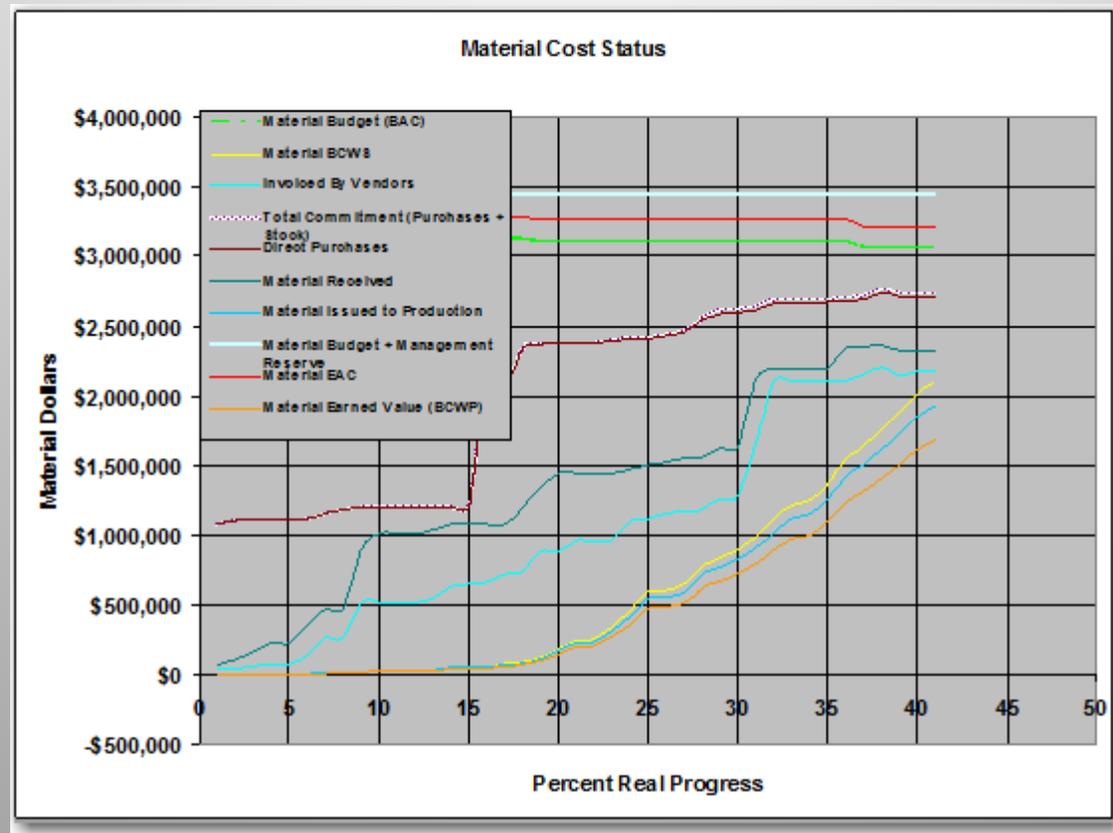

Cost & Schedule Performance Reporting

- **By Ship System (SWBS)**
- **By Interim Product (PWBS - Zone & Unit Module)**
- **By Shipyard Process (Chart of Accounts, COA)**
- **By Shop Trades & Skill Group**
- **By Work Order**

Contract Cost Management

- **Contract Budget At Completion ("BAC")**
- **Actual Costs of Material Committed (POs + Stock)**
- **Delivered Costs (Purchased Materials)**
- **Used Costs (Issued to Production)**
- **Current Liability: Delivered + Stock Used ("ACMP")**
- **Estimated Total Cost At Completion ("EAC")**
- **Total Paid Costs**
- **Earned Value of Material Spent ("BCMP")**
- **Planned Costs As Scheduled("BCMS")**
- **Material Management Reserves**

Graphics Material Cost Status Reports

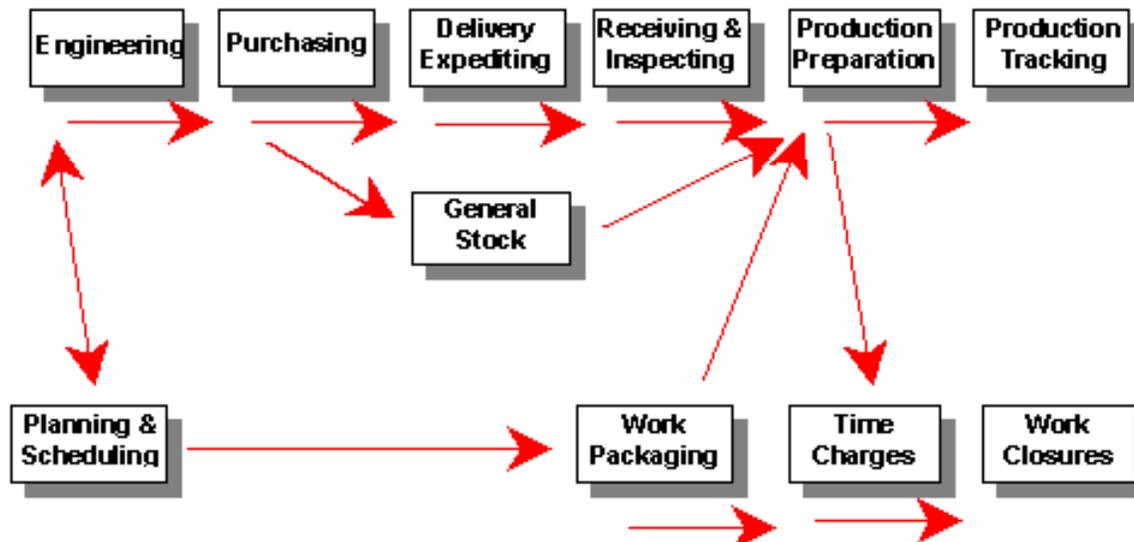

Detail Transaction Reporting

- **Purchase Item Transactions**
- **Purchase Amendment Transactions**
- **Delivery Receipt Transactions**
- **Production Issue Transactions**
- **Vendor Invoice Transactions**

PERCEPTION MAT-PAC is fully integrated
with other *PERCEPTION* System modules.

PERCEPTION ties together information from all areas of the shipyard

Material Planning, Purchasing & Inventory Control:

Labor Planning & Cost/Schedule Control:

- Track Tool Usage
- Track Tool Repairs
- Track Tool Costs & Purchasing Sources

Customizing Display Layouts

PERCEPTION offers a number of features that allows the user to customize the system.

Data Window Designer

All columnar worksheets, free-form data windows and most system reports can be edited & customized by the user:

1. **Text Headings & Data Field Labels can be modified to suit specific user requirements. This includes using non-English text and Windows-supported non-English alphabetic characters.**
2. **Un-needed data columns and free-form data fields can be hidden from displayed view.**
3. **Data Fields re-arranged and re-sized in free-form data windows.**
